Presented LUXURY INTEGRATED TECHNOLOGIES

Designing for Tech: Planning Smart Home Infrastructure

Many new products on the market claim to be “smart”, but how do these devices improve clients’ experience in their homes? Learn what it takes to successfully integrate smart technology in your projects. Discover examples of how technology can enhance the lifestyle of homeowners and understand the critical considerations for service and support.

EARNING

AIA: 1LU|HSW, CEU Code: 202510. Expiry, 07/11/2028

IDCEC: 1LU|HSW, CEU- 124833. Expiry, 12/31/2027

Elevating Outdoor Living Through Technology

Today’s modern home has various forms of integrated technology, not only inside, but outside as well, and this market has grown beyond just simple audio and video options. One thing trade partners and clients need to know is that the list of possible technologies that can be installed and controlled is long! Outdoor space is one of the fastest growing markets. This course will provide design and build partners with a familiarity with outdoor technology options and how the environment (both weather, location, and terrain) influences outdoor technology choices. Additionally, participants will discuss the infrastructure, and equipment needs and options to ensure a successful project!

Healthy Spaces: Technology's Role in Wellness Design

As we strive to build healthier, and more sustainable homes, automation & integration are paramount for implementing wellness technologies. We will discuss why traditional building practices need to be improved upon and updated, as well as understand the impact of air and water quality for inhabitants of the home. Attendees will be able to understand why an integrator should be brought on early and can collaborate with other trades and specialists in wellness technology. Additionally, participants will be able to identify the importance of a healthy home and the technology within – cohesive unit for wellness & sustainability.

Home Theaters & Media Rooms: A Design-Forward Approach

Residential entertainment spaces are no longer defined by equipment—they are defined by experience. The modern home theater or media room must seamlessly integrate acoustics, lighting, spatial planning, and technology to deliver both exceptional performance and refined aesthetics. This session explores how intentional design and early collaboration can transform AV environments into immersive, intuitive, and beautifully integrated spaces.

Integrating Technology and Design

Today's home is an ecosystem of interconnected technologies that shape how occupants live, feel, and interact with their environment. For design professionals and integrators, success lies not just in selecting the right technologies—but in coordinating them early and intentionally so they integrate seamlessly into the architecture and design narrative.

IDCEC: 1LU|HSW, CEU 120159 . Expiry, 03/31/2026

Layered Light: Crafting Atmosphere Through Design and Technology

Lighting isn't just about visibility—it defines how a home feels and functions. This course explores practical strategies for layering light, selecting the right color qualities, and using controls like dimming and tuning. It also highlights coordination and documentation approaches that help teams deliver seamless, efficient, and well-executed lighting designs.
